

Backup

for Workgroups™

Automatic
Backup
&
Restore

Up to 96% of all business PCs are not being backed up.¹

Are you prepared for data loss? Most people are not. Why? Some people simply forget to backup. Some are too busy. And some cannot justify paying for a backup solution that costs more than the computer to backup!

When you or a co-worker experiences data loss, it can affect everyone. And data loss never happens at a convenient time. Data loss can result in missed deadlines, incomplete projects and lost opportunity.

Protect your valuable data with Backup for Workgroups. It is designed especially for small to medium-sized offices and workgroup environments.

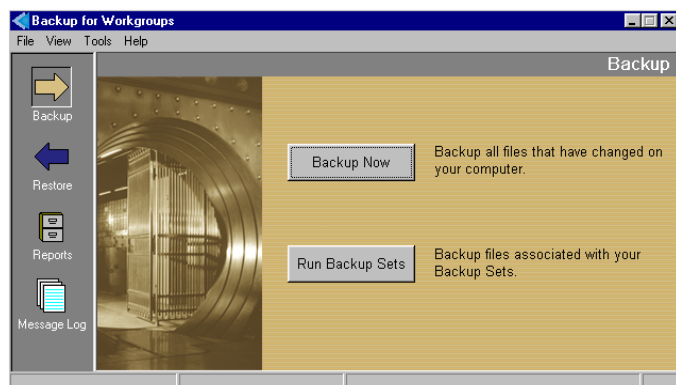

Backup for Workgroups is a centralized, disk-based backup utility that is both user and budget friendly. The Backup Server software is easy to install on any networked Windows computer in your office. Use hard drives for storage in place of tapes, they are more reliable and cost less per gigabyte. Use removable hard drives so you can store your data off-site as part of your overall disaster recovery plan.

Ensure your ability to restore your data when disaster strikes. Get Backup for Workgroups. It automatically backs up all your networked Windows computers and can restore a file, directory or your entire computer in minutes.

¹ Strategic Resource Corporation

PRODUCT HIGHLIGHTS

- **AUTOMATIC BACKUP** - Protect yourself from data loss due to damaged equipment, software upgrades, viruses, user mistakes, hackers and theft. Set up regular, unattended backups to make sure your files are backed up automatically.
- **FILE RECOVERY ASSURANCE GUARANTEE** - As you backup, your files are put through a simulated restoration process. This guarantees your files can be 100% restored when you need them. You can restore whatever you need, from a single file to a complete computer in just a few minutes.
- **FAST & EFFICIENT** - After your initial computer backup, only new or changed files are backed up. Backing up just your changes shortens your backup time and reduces storage requirements and network traffic. File compression further decreases storage space and bandwidth use.
- **SECURE** - Backup for Workgroups is security minded. Your files are encrypted before they are sent over your network, which protects sensitive data from unauthorized access. Rest assured that your data is also safe on the Backup Server, because password protection is required for any file access and even your file names are encrypted and hidden.
- **SAVES TIME & MONEY** - Because Backup for Workgroups is hard drive based, you save time when you need to restore your data because you do not need to sort through boxes of tapes. And you use a more reliable storage media that is cheaper per gigabyte than tapes!

*Backup your computer immediately before disaster strikes!
Use the Backup Set Wizard to group files for more frequent backups.*

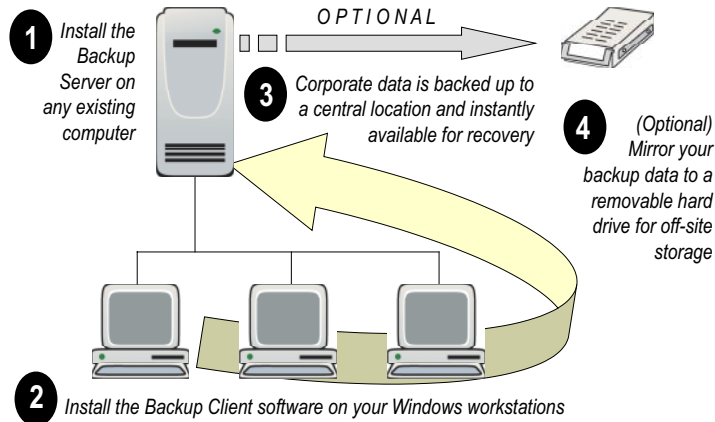

BACK IT UP.
DON'T SWEAT IT.
RESTORE IT.

Backup

for Workgroups™

PROTECT YOUR WORKSTATION DATA!

INSTALLING BACKUP FOR WORKGROUPS IS AS EASY AS 1-2-3!

SYSTEM REQUIREMENTS

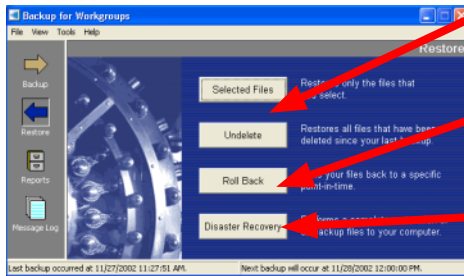

The Backup Server runs on any Windows 95/98/ME/NT/2000/XP computer and consumes 10 MB storage. Needs access to a hard disk with sufficient free disk space to hold Clients' backup data.

For example, an 80 GB hard drive has more than enough room to hold the compressed backup data for 40 people, assuming each person has 2 GB of unique data.

The Backup Client software runs on any networked Windows 95/98/ME/NT/2000/XP computer and consumes 10 MB storage.

DATA RECOVERY OPTIONS DESIGNED TO HELP YOU

QUICKLY & EASILY RESTORE YOUR DATA TO GET YOU BACK TO WORK

Restore Selected Files and Deleted Files

Backup for Workgroups helps you recover previous file revisions and accidentally deleted files, even if you cannot recall their name or location.

Roll Your Computer Back in Time

Are you experiencing problems from a virus or a new download? Backup for Workgroups can easily roll your computer "back in time." Use the Roll Back feature to restore files to a previous backup by date/time.

Disaster Recovery

Backup for Workgroups generates a customized disaster recovery guide, just for your computer. This report gives you easy-to-follow, step-by-step instructions to restore your complete computer, including: setting up your hard drive, installing your Operating System, and using Backup for Workgroups to restore your computer to the state of your last backup.
